

CARE & HANDLING OF PORTABLE BARRIERS

Setting Up

Retractable Barriers

Do not pull the belt of a retractable barrier to the end of its extension with a jerk as this can dislodge the spring and the belt will no longer retract. Always leave 6" to 12" of belt within the housing to allow for play should the belt be pulled, pushed or leant on. If fully extended any lateral pressure on the belt could cause the post to topple over and may cause accidental injury.

Rope Stanchions

Proper stanchion spacing is the key to giving each rope an even, graceful "drape". Stanchions should be spaced so that the ropes hang with their centers a minimum of 24" from the floor

Note: Maximum recommended rope length for use with portable barriers:
Sloped/Flat Base: 8ft
Dome Base: 6ft

Queue System Isle Width

We recommend a minimum isle width of 36". If the queue system is to provide wheelchair access isle width should be a minimum of 42" on the straight and 48" at the turn.

Minimum recommended isle width if alternative wheelchair access is provided is 36"

Minimum recommended isle width for wheelchair access is 42" and 48" *at the turn.

* Widths are measured from the edge of the barrier base.

ADA Compliance

For full ADA (Americans with Disabilities Act) compliance the above isle width recommendations should be followed and the barriers used must have the lowest belt not more than 27" from the floor surface. Any of Queue Solutions range of Twin or Triple belt barriers meet this specification.

CARE & HANDLING OF PORTABLE BARRIERS

Moving

If moving posts by hand grip the post towards the base and carry with the base clear of the floor. Avoid dragging or rolling the barrier on the edge of the base as this may cause damage to the rubber floor protector.

DO carry clear of the floor

DO NOT drag

Storing

We recommend the use of storage carts for moving and storing stanchions. Storing 21 barriers on the floor takes approximately 33sq ft of space, the same number of barriers in a storage cart only takes 10 sq ft. Store in a dry environment, if not using a storage cart avoid overlapping the barriers bases as this will make the barriers unstable and may scratch the base cover.

STCART18/21
18 or 21 post storage cart

STCART12
12 post storage cart

Cleaning

Use Windex or similar product and a soft cloth for cleaning; do not use abrasives or detergents.

DO NOT use abrasive cleaners such as Brasso

DO use Windex or similar & a soft cloth

Weather

Some Queue Solution's models such as WeatherMaster and WeatherPro are designed for all weather use however most others require a custom weatherizing process to be made suitable for use outdoors. Standard Queue Solutions barriers are designed for indoor use and should be kept dry. If used outdoors do not leave in standing water and do not store wet.
