

SET UP AND HANDLING OF QUAD BELT BARRIERS

When setting up the barrier start by extending the lowest belt first and then work up, deploying the top belt last.

This barrier has an 11' belt, as with all retractable barriers the belts should not be fully extended. Always leave 12" of belt within the housing to allow for play should the belt be pulled, pushed or leant on. If fully extended any lateral pressure on the belt could cause the post to topple over and may cause accidental injury.

If the top belt is being used the maximum extension should be 9'.

NOTE: This product is supplied with an extra heavy weight base, total weight is 42lbs. Normal care should be taken when lifting or moving.
