

Magnetic mounted stanchions offer the advantage of providing a fixed queue installation without having to drill into the floor. The magnetic mount prevents the stanchions from moving during use ensuring the queue system stays in line as originally set out. The six, 30mm diameter, high strength magnets in the base will withstand the bumps and knocks of everyday use but can be removed by a concerted pull on the post top. The base has a self-centering feature that makes it easy to align it with the floor plate.

The 8.6" diameter steel base plate is supplied with 3M VHB adhesive tape for a strong bond to the floor surface. At only 1/16" thick the base plate is a minimal trip hazard when the post is removed.

The QueuePro Magnetic is supplied complete with the Base Plate and can be fitted with an optional magnetic belt end.

6 x 30mm magnets

Self adhesive steel base plate

► SPECIFICATIONS

Height	39" / 990mm
Weight	8lbs / 3.6kg
Post OD	2.5" / 64mm
Base OD	8.8" / 225mm
Base Height	3" / 76mm
Base Plate OD	8.6" / 220mm
Base Plate Height	1/16" / 2mm

► Notes

- The self-adhesive supplied on the base plate requires a clean, smooth floor surface. Ensure floors are stripped of wax or other coatings.
- For use on less clean/smooth surfaces epoxy is recommended.
- Customers are responsible for determining the suitability of floors for use with this product in relation to adhesion and the possibility of floor damage when the base plate is removed.
