

These barricades are manufactured from heavy duty 16 gauge steel with 1.5" diameter frame tubing. 21 close spaced uprights are fully inserted into the frame before welding providing extraordinary strength. The upright spacing of 3 3/4" prevents children from getting stuck between the uprights. Available with Hot Dip Galvanizing for maximum weather resistance or a range of Powder Coat colors. The barricades interlock using a twin hook and loop system so you can create a crowd barrier of any length.

Feet options include Flat for smooth surfaces such as tarmac, Bridge for uneven surfaces such as grass, Heavy Duty for maximum strength, ADA compliant for minimum trip hazard, and Roller for easy movement.
